ABOUT ME

Cloud backend developer at Check Point with **4+ years of experience**, building large-scale, real-time email-security systems on AWS. Design and own microservices that handle **billions of events a week**. Serve as the team's go-to for production debugging and monitoring. A continuous learner (**B.Sc. Computer Science & 30+ additional professional courses**) and former Givati unit commander who mentors others. Build with AI coding agents daily.

EXPERIENCE

Cloud Backend Software Developer | [Check Point Software Technologies](#) | Oct 2022 – Present (**4 Years**)

Build and own cloud backend services for a large-scale email security product, designing several of its high-traffic systems with **Python, Docker, and AWS (DynamoDB, SQS, OpenSearch, ElastiCache, and more)**. Work closely with cross-functional teams to ship reliable, high-performance microservices.

IMPACT

- Designed **10+ backend systems** from the ground up - architecture, planning, testing, and rollout.
- Created **15+ Grafana dashboards** and the team's incident playbooks, cutting time-to-diagnose.
- Unlocked **hundreds of Microsoft & Google event types**, powering multiple detection features.

MAIN PROJECTS

- **Microsoft & Google Event Streaming** - high-scale ingestion pipeline that subscribes to Microsoft and Google activity APIs, receives events through webhooks, and processes and stores **billions of events weekly** (Python, Docker, AWS SQS, DynamoDB & OpenSearch). These events feed the security scans that detect malicious activity.
- **Delivery Safety Net** - the product's "last line of defense": catches anything that fails normal processing and delivers it to the customer anyway. Runs at **high scale**, monitored end to end (**Prometheus, Grafana, Nagios**) - the one component that must never fail.

Team Leader (Volunteer) | [Max Impact · Non-Profit](#) | Sep 2024 – Oct 2025 (**1 Year**)

Led a team of 3–5 junior volunteer developers building a web platform that helps a non-profit support at-risk teenage girls, while mentoring them toward their first industry roles. [More Info ↗](#)

IMPACT

- Made the organization's monitoring and case management **3× faster**, helping staff reach the girls most at risk sooner.

Private Tutor | [Self-Employed](#) | Feb 2022 – Mar 2023 (**1 Year**)

Prepared high school students for Bagrut exams in C# programming language.

Malware Analyst (Student Position) | [Check Point Software Technologies](#) | Dec 2021 – Oct 2022 (**8 Months**)

Researched newly disclosed vulnerabilities (CVEs), reproduced the attacks they enable, and built the protections that block them for Check Point's customers.

EDUCATION

B.Sc. Computer Science - The Academic College of Tel Aviv–Yaffo | Oct 2019 – Oct 2023 (**3.5 years**)

[Included in Dean's List.](#)

Professional Courses (**30+ Courses**) - Udemy & Others | Self-paced, alongside my degree and work

Learning paths: Python Foundation · Networking & Protocols · API Design · Software Architecture · Security · AI-Augmented Dev · Career Growth

TOP 3 COURSES

- Python Deep Dive (4 Parts)** - inner mechanics & advanced aspects of Python 3 · Udemy · **140 Hours**
- Backend Engineering Fundamentals** - client-server patterns, protocols & scaling · Udemy · **16 Hours**
- Clean Code** - readable, maintainable code & SOLID principles · Udemy · **7 Hours**

SKILLS

Technical: Python · AWS (ECS, SQS, DynamoDB, OpenSearch, S3, Lambda) · Docker · PostgreSQL · Redis · Linux · CI/CD (Jenkins) · Grafana & Prometheus · Microservices · REST API Design · AI-Assisted Development

Interpersonal: Team Leadership · Mentoring · Production Ownership · Knowledge Sharing
